```
sequencing reads that have not been assembled into contigs. Runs of N are used to separate the reads and the order in which they appear is completely arbitrary. Low-pass sequence sampling is useful for identifying clones that may be gene-rich and allows
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            overlap relationships among clones to be deduced. However, it should not be assumed that this clone will be sequenced to completion. In the event that
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               be preserved.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                CC for these proteins. DNA-binding proteins such as histones, chromo CC (chromatin organisation modifier) domain proteins, and Y-box binding CC proteins may contribute to diseases resulting from aberrant DNA CC organisation and/or gene transcription. The sequences of the invention CC are useful in screening assays to identify antagonists and/or agonists CC that may enhance or block activities mediated by DNA-binding proteins. CC Blockers of DNA-binding proteins may be useful in treating disorders CC such as malignant diseases (e.g. cancer), autoimmune disorders CC (e.g. diabetes mellitus), rheumatic diseases (e.g. rheumatoid CC arthritis), genetic abnormalities (e.g. cystic fibrosis), infectious CC disease). The polynucleotide sequences of the invention may also be CC used in gene therapy. AAS29030-AAS29157 represent cDNA sequences CC used in gene therapy. gene their complements can be useful for assaying the presence of a nucleic cacid molecule in a sample. (I) is useful for disgnosing or aiding in the CC diagnosis of an early onset neurodegenerative disease in an individual.

The neurodegenerative disease comprises reduced sensory nerve conduction, reduced motor nerve velocity hypermyelination of retinal nerve fibres, atrophy of upper cerebellar vermis, absence of purkinje cells and antisense nucleic acids, is useful as molecular weight or chromosome can markers, to identify genetic disorders, as hypidisation probes or primers, as an antigen, identify and express recombinant protein for analysis, characterisation or therapeutic use, or as markers for tissues in which the corresponding protein is expressed. Diagnostic methods from the present invention can be used to identify subjects having or at risk of developing a disease or disorder associated with aberrant expression or activity of (I). The assays can be utilised to identify a subject having or at risk of developing a disorder associated with Spastin protein or spastin gene expression or activity. The present sequence

markers, to identify genetic disorders, as hybridisation probes or primers, as an antigen, identify and express recombinant protein for analysis, characterisation or therapeutic use, or as markers for tissues in which the corresponding protein is expressed. Diagnostic methods from the present invention can be used to identify subjects having or at risk of developing a disease or disorder associated with aberrant expression or activity of (I). The assays can be utilised to identify a subject having or at risk of developing a disorder associated with Spastin protein or spastin gene expression or activity. The present sequence encodes human spastin as given in the present invention.
                                                                                                                                                                                                                  gene therapy and as a spastin polypeptide agonists. (1), their fragments or their complements can be useful for assaying the presence of a nucleic acid molecule in a sample. (1) is useful for diagnosing or aiding in the diagnosis of an early onset neurodegenerative disease in an individual. The neurodegenerative disease comprises reduced sensory nerve conduction, reduced motor nerve velocity, hypermyelination of retinal nerve fibres, atrophy of upper cerebellar vermis, absence of Purkinje cells and abnormal neuronal lipid storage. (1) can also be used to produce antisense nucleic acids, is useful as molecular weight or chromosome
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Claim 1; Fig 9; 76pp;

          The present invention describes human and mouse spastin, and mutated human spastin (autosomal recessive spastic ataxia of Charlevoix-Saguenay (ARSACS)) gene sequences (I). The spastin gene has been mapped to chromosome 13q11. (I) have neuroprotective activities and can be used in gene therapy and as a spastin polypeptide agonists. (I), their fragments cor their complements can be useful for assaying the presence of a nucleic acid molecule in a sample. (I) is useful for disquosing or aiding in the diagnosis of an early onset neurodegenerative disease in an individual. The neurodegenerative disease comprises reduced sensory nerve conduction, reduced motor nerve velocity, hypermyelination of retinal nerve fibres, atrophy of upper cerebellar vermis, absence of Purkinje cells and abnormal neuronal lipid storage. (I) can also be used to produce antisense nucleic acids, is useful as molecular weight or chromosome markers, to identify generative as hypridisation probes or primare as an anticen identify and express recombinate protein for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    12741
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  12561

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         12261
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              analysis, characterisation or therapeutic use, or as markers for tissues in which the corresponding protein is expressed. Diagnostic methods from the present invention can be used to identify subjects having or at risk of developing a disease or disorder associated with aberrant expression or activity of (I). The assays can be utilised to identify a subject having or at risk of developing a disorder associated with Spastin protein or spastin gene expression or activity. The present sequence represents a mutated human spastin gene from the present invention.

N.B. The present sequence is not given in the present specification but is derived from the human spastin nucleotide sequence (AAH20174) as
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Sequence

                                                                                                                                                                                                                                                             CC The present invention describes human and mouse spastin, and mutated CC human spastin (autosomal recessive spastic ataxia of Charlevoix-Saguenay CC (ARSACS)) gene sequences (I). The spastin gene has been mapped to CC chromosome 13q11. (I) have neuroprotective activities and can be used in CG gene therapy and as a spastin polypeptide agonists. (I), their fragments CC or their complements can be useful for assaying the presence of a nucleic CC acid molecule in a sample. (I) is useful for diagnosing or aiding in the CC acid molecule in a sample. (I) is useful for disease in an individual. The neurodegenerative disease comprises reduced sensory nerve conduction, CC reduced motor nerve velocity, hypermyelination of retinal nerve fibres, CC atrophy of upper cerebellar vermis, absence of Purkinje cells and CC abnormal neuronal lipid storage. (I) can also be used to produce CC antisense nucleic acids, is useful as molecular weight or chromosome CC markers, to identify genetic disorders, as hybridisation probes or CC consists, as an antigen, identify and express recombinant protein for CC analysis, characterisation or therapeutic use, or as markers for tissues in which the corresponding protein is expressed. Diagnostic methods from CC of developing a disease or disorder accordance with the corresponding protein is expressed.
                                                                                                                                                                                        Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 abhormal neuronal lipid storage. (I) can also be used to produce antisense nucleic acids, is useful as molecular weight or chromosome markers, to identify genetic disorders, as hybridisation probes or primers, as an antigen, identify and express recombinant protein for analysis, characterisation or therapeutic use, or as markers for tissues in which the corresponding protein is expressed. Diagnostic methods from the present invention can be used to identify subjects having or at risk of developing a disease or disorder associated with abarrant expression or activity of (I). The assays can be utilised to identify a subject having or at risk of developing a disorder associated with Spastin
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       gene therapy and as a spastin polypeptide agonists. (I), their fragments or their complements can be useful for assaying the presence of a nucleic acid molecule in a sample. (I) is useful for diagnosing or aiding in the diagnosis of an early onset neurodegenerative disease in an individual. The neurodegenerative disease comprises reduced sensory nerve conduction, reduced motor nerve velocity, hypermyelination of retinal nerve fibres, atrophy of upper cerebellar vermis, absence of Purkinje cells and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          N.B.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               protein or spastin gene expression or activity. The encodes a mutated human spastin.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      (ARSACS)) gene sequences (I). The spastin gene has been mapped chromosome 13q11. (I) have neuroprotective activities and can {\bf i}
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present invention describes human and mouse spastin, and mutated human spastin (autosomal recessive spastic ataxia of Charlevoix-Saguenay

proteins (AAU18154-AAU18281), and cDNA and genomic sequences encoding CC (chromatin organisation modifier) domain proteins, and Y-box binding CC proteins may contribute to diseases resulting from aberrant DNA.
CC organisation and/or gene transcription. The sequences of the invention are useful in screening assays to identify antagonists and/or agonists CC that may enhance or block activities mediated by DNA-binding proteins may be useful in treating disorders CC such as malignant diseases (e.g. activities mediated by DNA-binding proteins.
CC (e.g. diabetes mellitus), rheumatic diseases (e.g. rheumatoid carthritis), genetic abnormalities (e.g. cystic fibrosis), infectious diseases (e.g. HIV) and neurological disorders (e.g. Alzhelmer's CC diseases (e.g. HIV) and neurological disorders (e.g. Alzhelmer's CC disease). The polynucleotide sequences of the invention may also be used in gene therapy. AAS29030-AAS29157 represent cDNA sequences CC Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at first the printed sequence 1387 NP. 404.

The sequences can be used in the diagnosis and treatment of immune system disorders, including eye diseases such as retinopathy, neovascular glaucoma and macular degeneration, arteriosclerosis, anaemia, cancer, acute myeloid leukaemia, Alzheimer's disease, AIDS, epilepsy, neurofibromatosis, rheumatoid arthritis, psoriasis and inflammatory/ulcerative bowel diseases. The present sequence is a gene of the invention.
antiarteriosclerotic; antianaemic;

                                                                                                                                                                                                                                                                                                                                                                                                                                   The present invention provides a number of human immune system associated genes which are modified by the methylation of cytosines. The sequences can be used in the diagnosis and treatment of immune system disorders, including eye diseases such as retinopathy, neovascular glaucoma and macular degeneration, arteriosclerosis, anaemia, cancer, acute myelold leukaemia, Alzheimer's disease, AIDS, epilepsy, neurofibromatosis, rheumatorid arthritis, psoriasis and inflammatory/ulcerative bowel diseases. The present sequence is a gene of the invention.

                                                                                                                        The present sequence encodes a polypeptide (Pf-SUB2) which has a calcium-dependent serine-protease activity. The Pf-SUB2 gene is expressed during the differentiation phase of merozoites. The protein is implicated in maturatuion of the major surface protein 1 of merozoites (MSP1-42). The enzyme is also crucial for entry of the parasite into erythrocytes. The polypeptides and polynucleotides are used to identify inhibitors of Pf-SUB2. These inhibitors e.g. antibot used for the detection, prevention, and treatment of malaria due

```

The present sequence encodes a polypeptide (Pf-SUB2) which has a calcium-dependent serine-protease activity. The Pf-SUB2 gene is expressed during the differentiation phase of merozoites. The protein is implicated in maturatuion of the major surface protein 1 of merozoites (MSP-42). The enzyme is also crucial for entry of the parasite into erythrocytes. The polypeptides and polynuclotides are used to identify inhibitors of Pf-SUB2. These inhibitors e.g. antiboo

The sequences are useful for detecting the methylation state of all CpG dinucleotides in a sequence and therefore for analysing associated diseases. By analysing cytosine methylations in the pretreated DNA, genetic and/or epigenetic parameters for the diagnosis and therapy of existing diseases or the predisposition to specific diseases can be ascertained. The parameters may be compared to another set of genetic and/or epigenetic parameters, the differences serving as basis for diagnosis and/or prognosis events which are disadvantageous to patients. The sequences of the invention are useful for the diagnosis and therapy of HIV infection, neurodegenerative disorders, graft-versus-host disease, aging, glomerular disease, Lewy body disease, arthritis,

                                                                                                                                                                                                                                                                                                                                    genes which are modified by the methylation of cytosines. The sequences can be used in the diagnosis and treatment of immune system disorders, including eye diseases such as retinopathy, neovascular glaucoma and macular degeneration, arteriosclerosis, anaemia, cancer, acute myeloid leukaemia, Alzheimer's disease, AIDS, epilepsy, neurofibromatosis, rheumatoid arthritis, psoriasis and inflammatory/ulcerative bowel diseases. The present sequence is a gene of the invention.
